## Introduction

This user guide is designed to provide documentation for people who will use our dating application 'D8Finder'. This document is designed to be read by any user of D8Finder, as most users will have access to the features documented here. There will be two sections of this guide: User part (for any normal user) and Administrator part (for Admin functionalities). In this manual, we will provide to users step-by-step procedures for system access and use with the screen capture of our application for better readability for users.

## User part

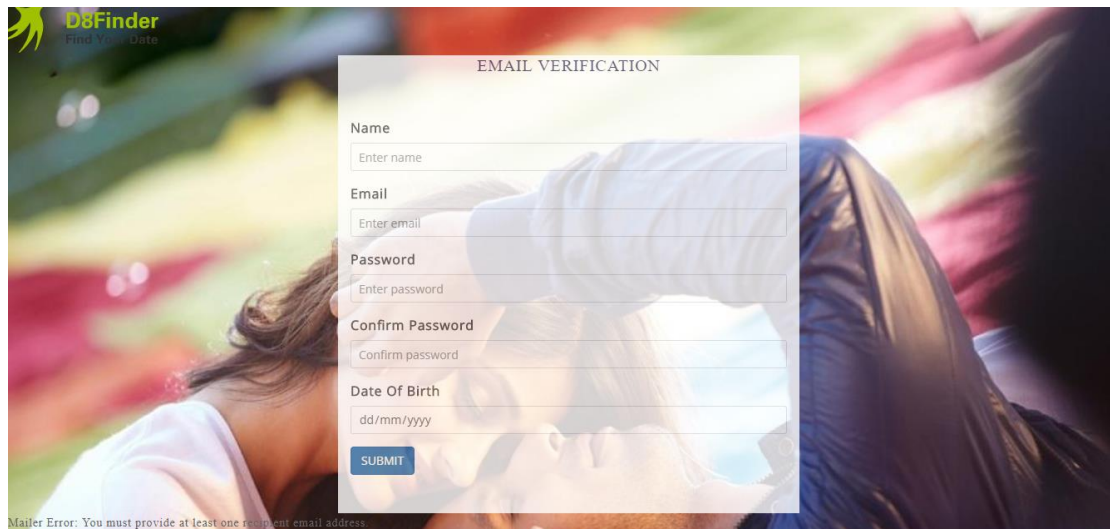

### Home page

User can see the login form and signup button on the index(home) page. If user provides their email/password, they can login into our website. If user does not have an account yet, they can click the signup button and it will redirect users to the registration page.

# User registration

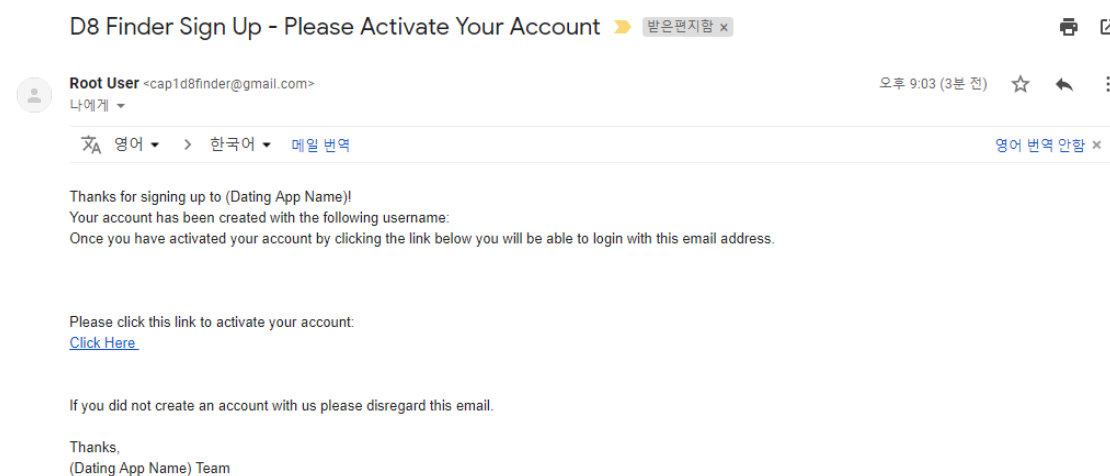

## 1) Email verification:

Before user sign up our website, the system needs to verify their email account first for checking if that user account is valid and authentic. Once, user filled in all required field and click submit button, the system will send a verification link to user's email so that they can verify their email account. Date of Birth is needed when user register to our website because our website is dating application and only allows person who is over 18.

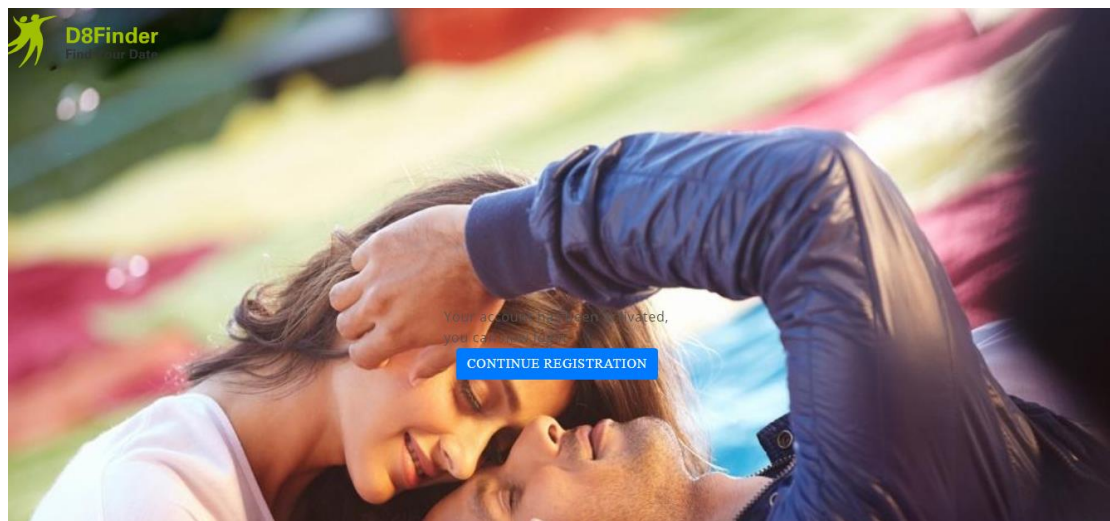

When user check their email account, they will be able to see this email which including the activation link from the system.

Once user, click the link “Click Here”, it will redirect users to the website. If you are

not able to see this link, please check your spam inbox in your email account.

Now user able to see that their account is activated. Click continue registration button to finish the registration process.

## 2) Provide detail personal information.

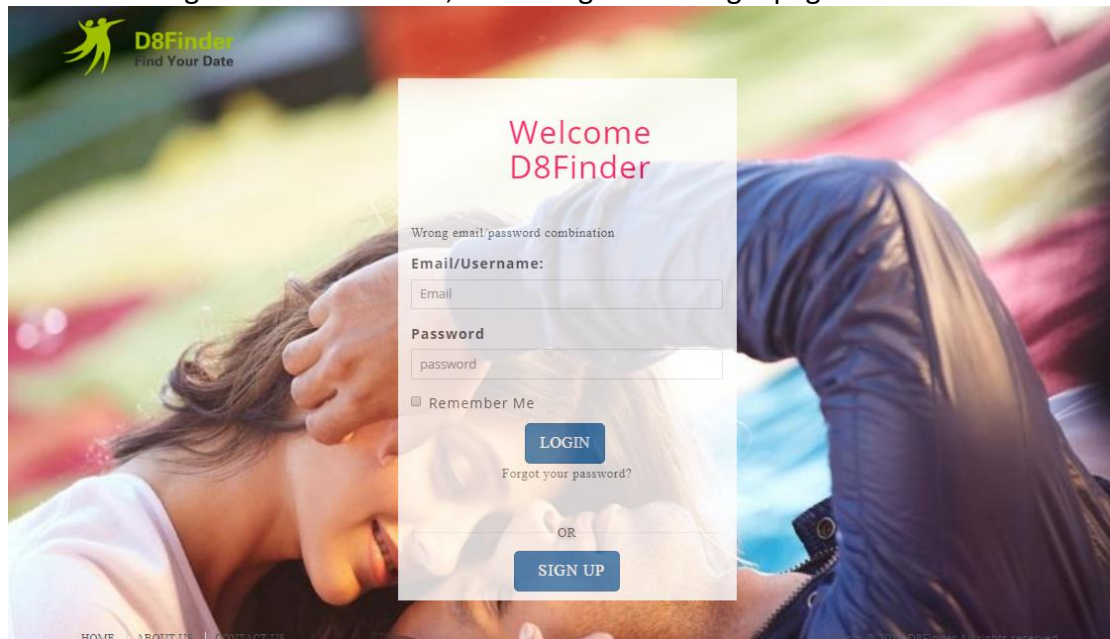

A screenshot of the D8Finder website showing the same couple. A semi-transparent sign-up form is overlaid. At the top, it says "Wrong email/password combination" and "SIGN UP". Below this, it says "Thank you for creating an account now we just need a few more details before you get started:" followed by an email address. The form includes fields for "Gender:", "Where you live:", "Interest 1:", "Interest 2:", "Education Level:", "Occupation:", and a text area for "Give us a short description of yourself:". A blue "SUBMIT" button is at the bottom. The D8Finder logo is in the top left corner.

Now user can see the signup form which includes the detail user information; Gender, Location (city), Interest 1, Interest 2, Education level (optional) and Occupation. These information will only be used for matching users by the system. Once user finished fill in and click submit button, it will redirect users to the home page.

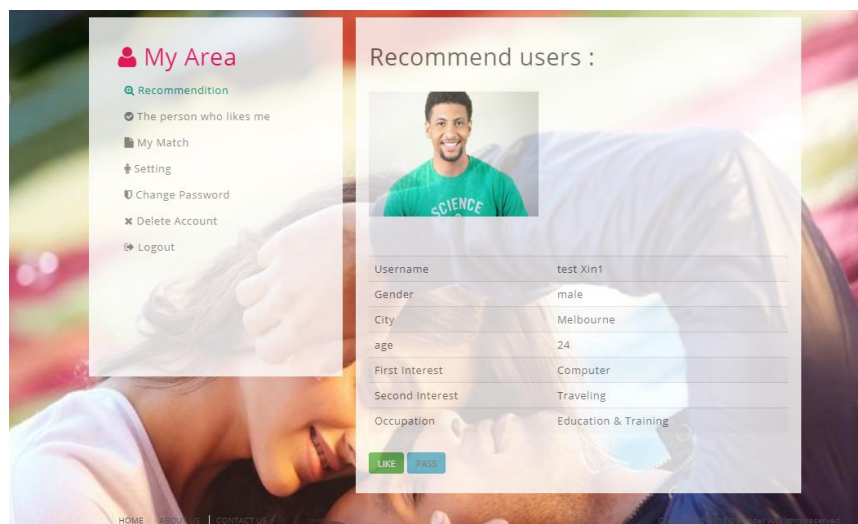

## User Login:

When user registration successful, user can go to the login page

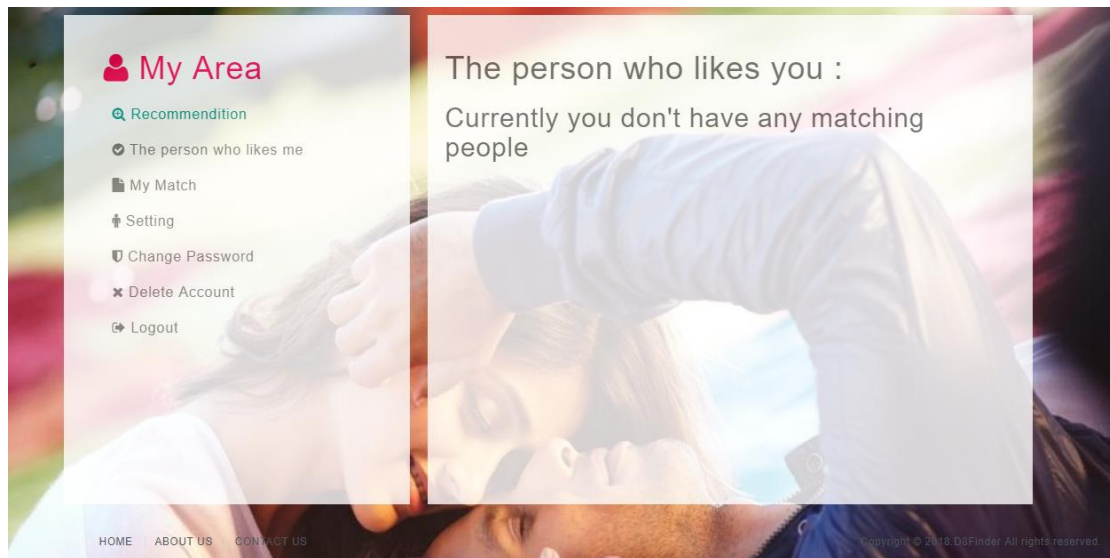

The user can use their own Email with Password to login the whole system.

## Recommendation Like / Pass / Send message:

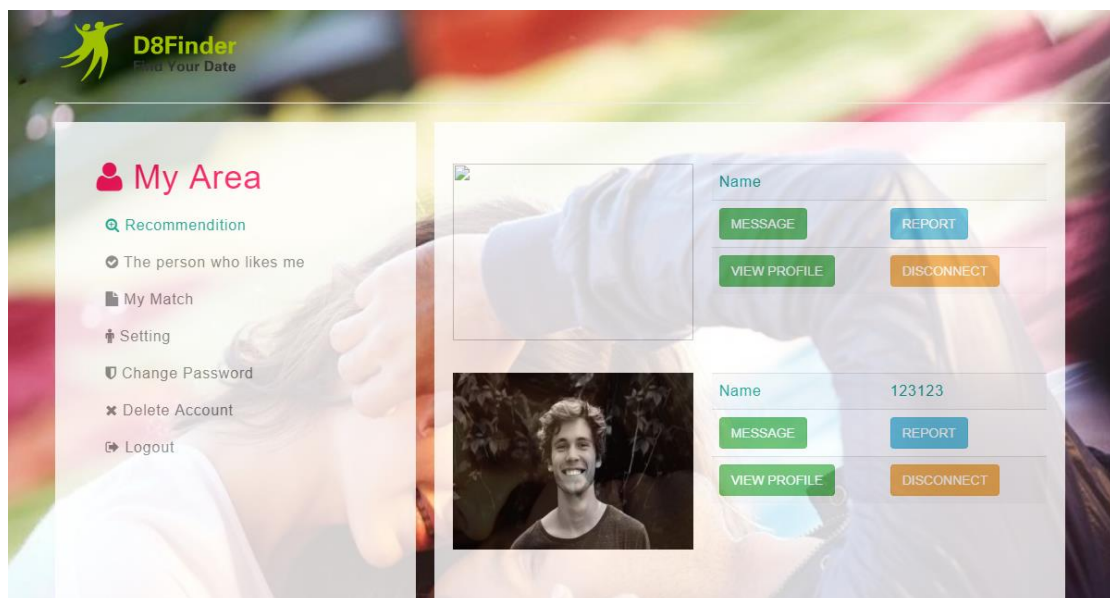

When user first login, recommend users will be shown based on provided user's information. User can choose either Like or Pass. If user choose Like, it will send to the system and user will be matched if the liked person like back that user. If user choose pass, page will show the different users.

## The Person Who Likes Me:

If someone likes you, in The person Who Likes Me page the users will be displayed, but unfortunately in this page nobody likes me. 😊

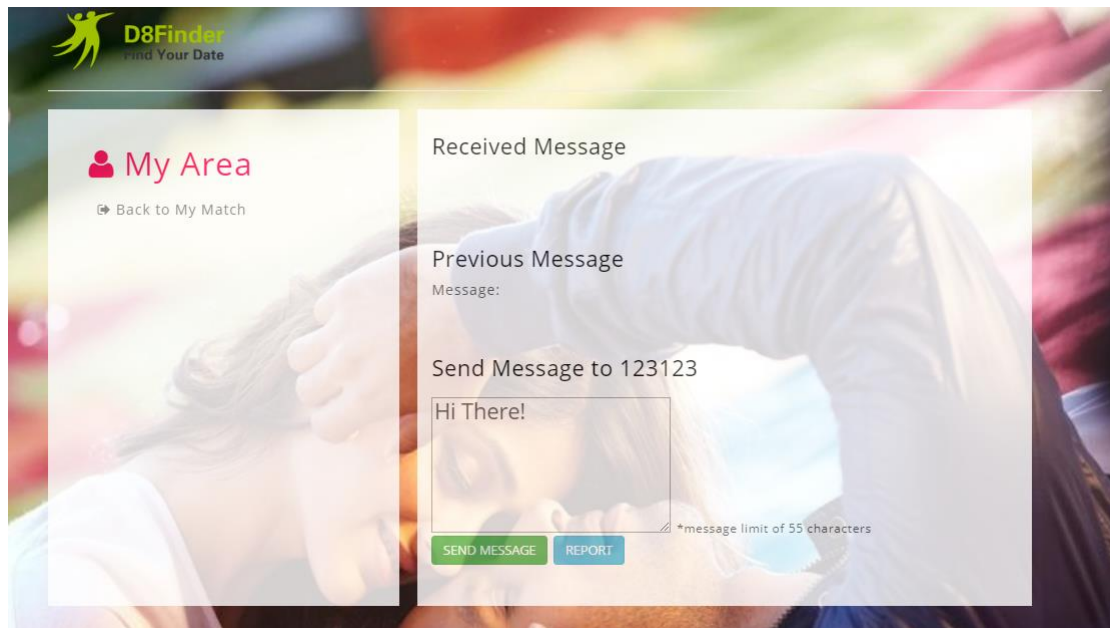

## My Match:

As we all know, in this page the user can check who like you at the same time, which means the guys likes you as well. Not only, you can send message to the user, but also you can check his or her profile or report and disconnect with he or she.

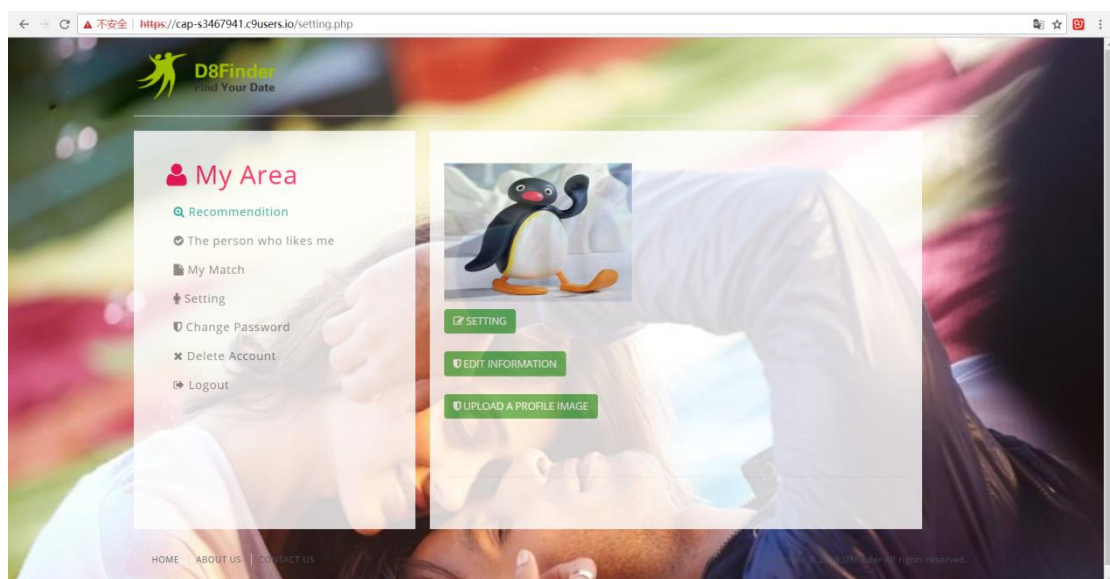

## Send message:

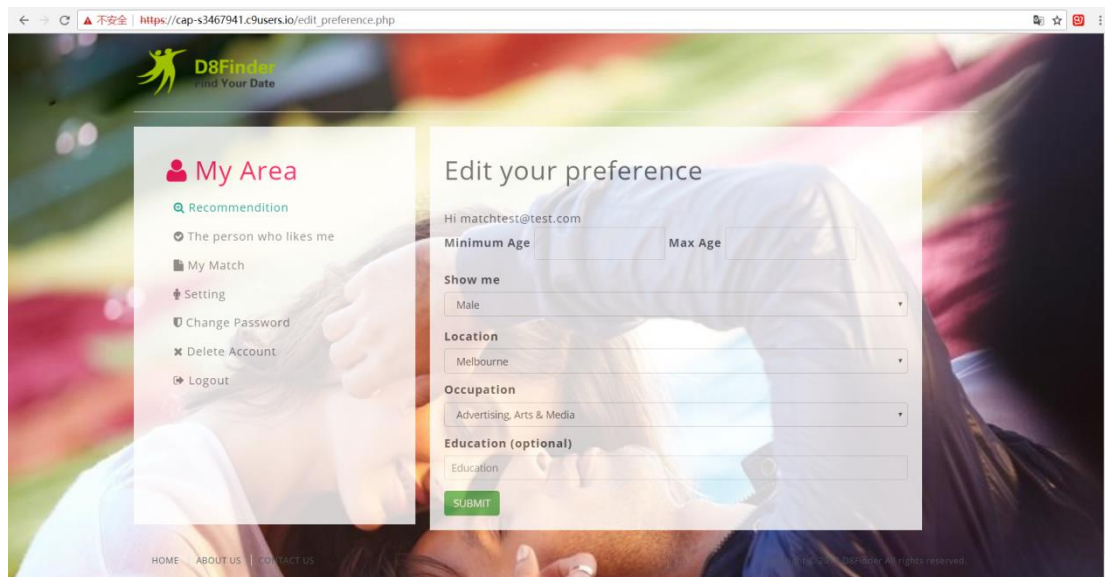

You can send the message to your matched user or you can report the message you have received from the other users. You can type your message into the textbox and click send message button to send a message to your matched user. Also, you can see the received message below 'Received message' and 'Previous message' area.

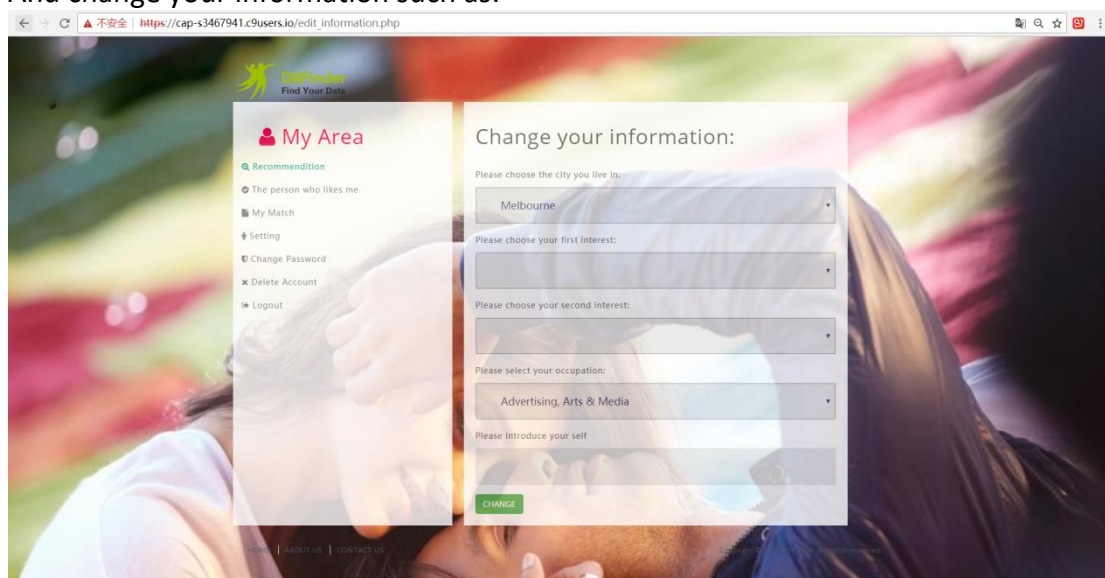

## Setting:

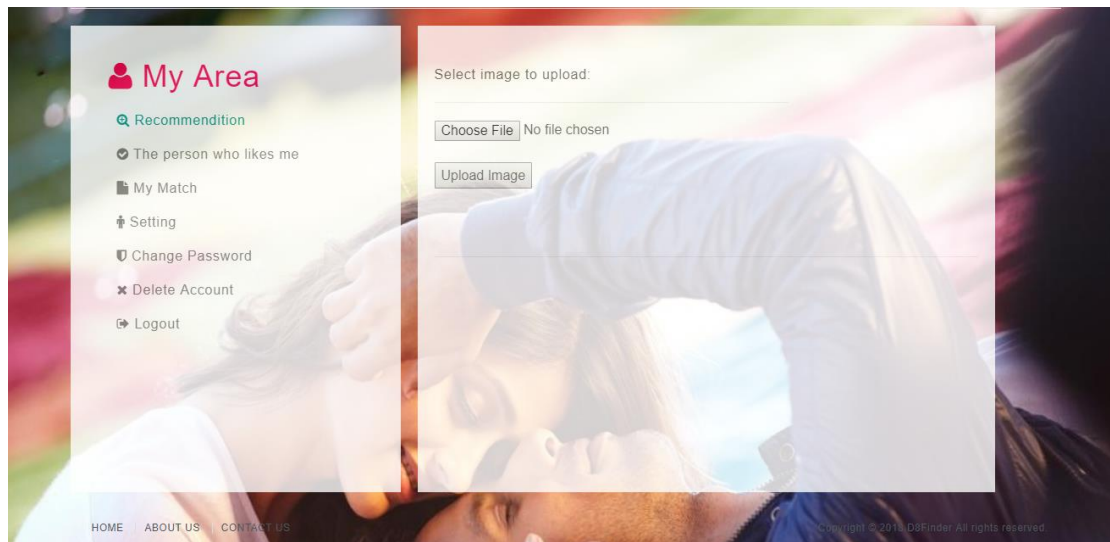

In this page, user can Setting their own profile such as:

And change your information such as:

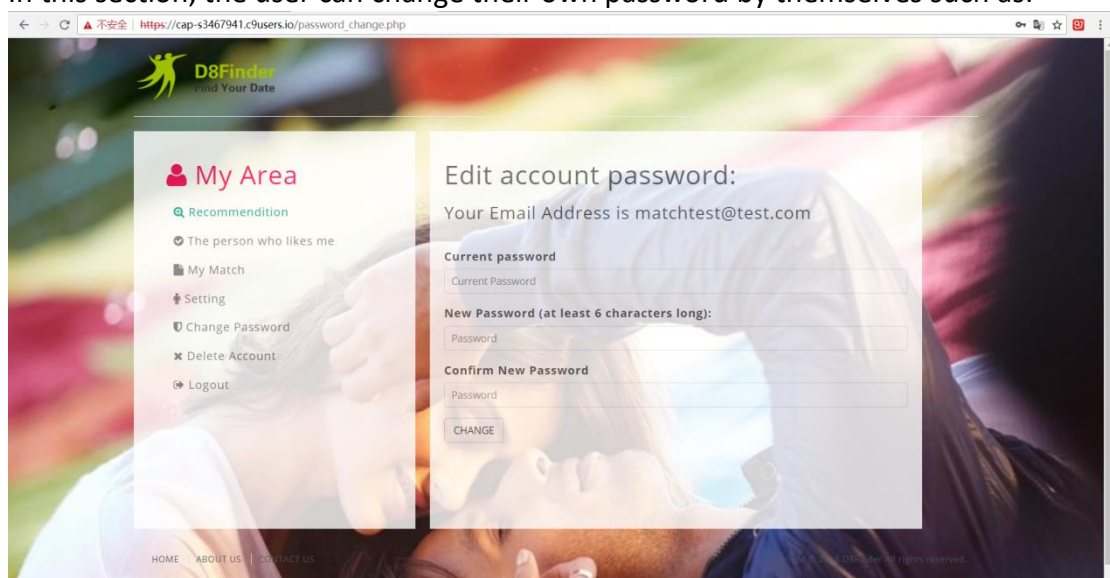

And upload your own profile image such as:

When user click choose file, user can see the popup window to choose the image from their local folder, and upload image by clicking upload image button.

## Change Password:

In this section, the user can change their own password by themselves such as:

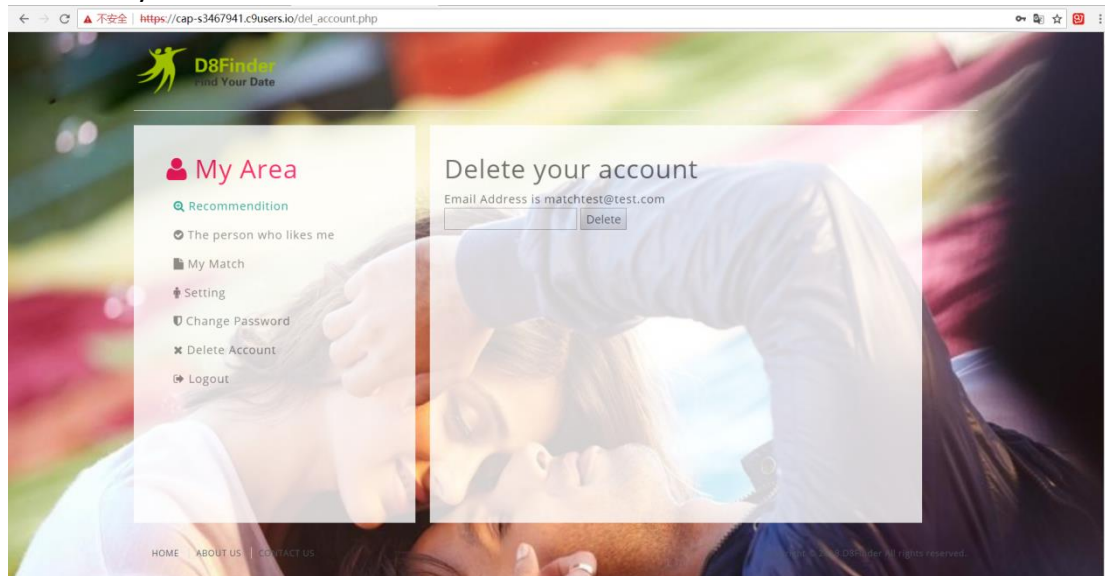

When user click change, the user's password will be changed and they should login again by new password.

## Delete Account:

In this part, if the user do not want use this system, they still can delete their own

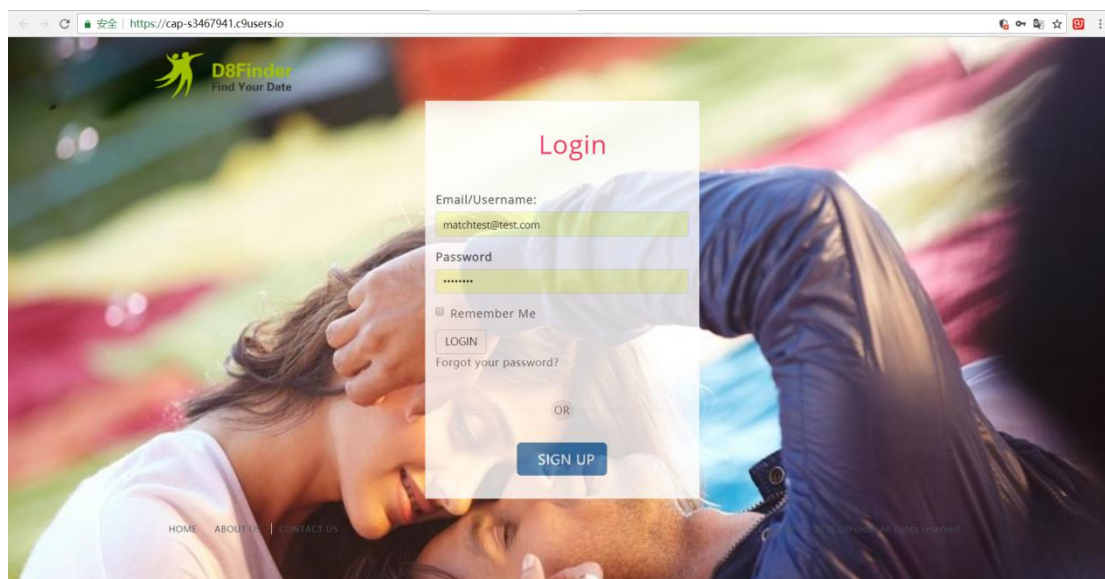

account by themselves such as:

When user put your own email and click the delete, your account will delete by yourself. ( Important warning: do not do that this is a very good system for you🙄)

## Logout:

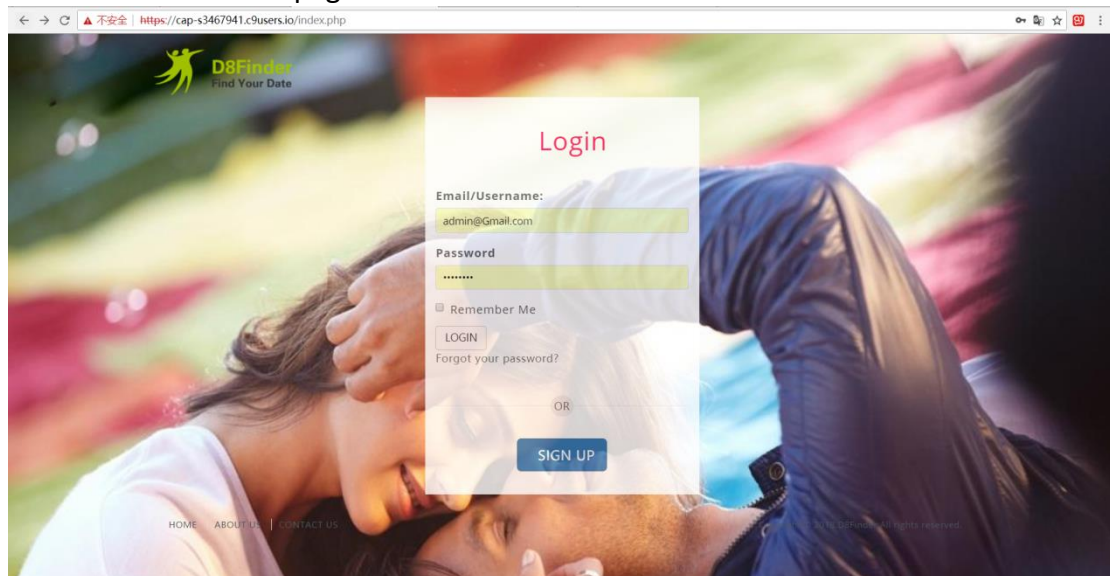

When the user click the logout, congratulation! The user has logout the system safety.

As all said above, this is the user part user manual. Let is move on to Admin part user manual.

## Administration part

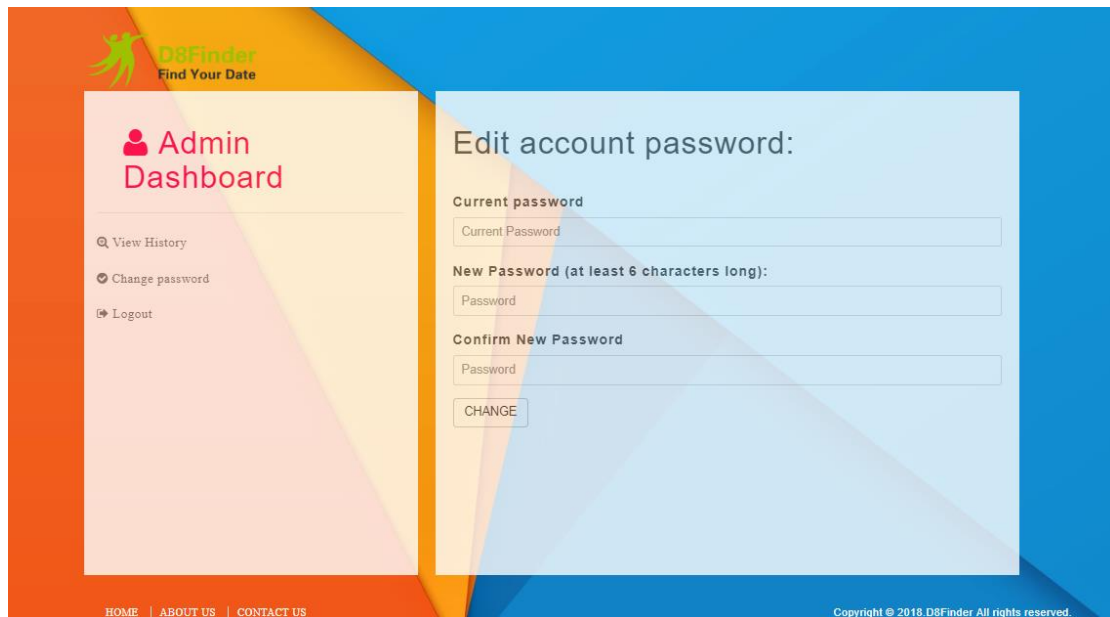

### Login:

In this part, the Admin can use the administration username and password to login the admin dashboard page such as:

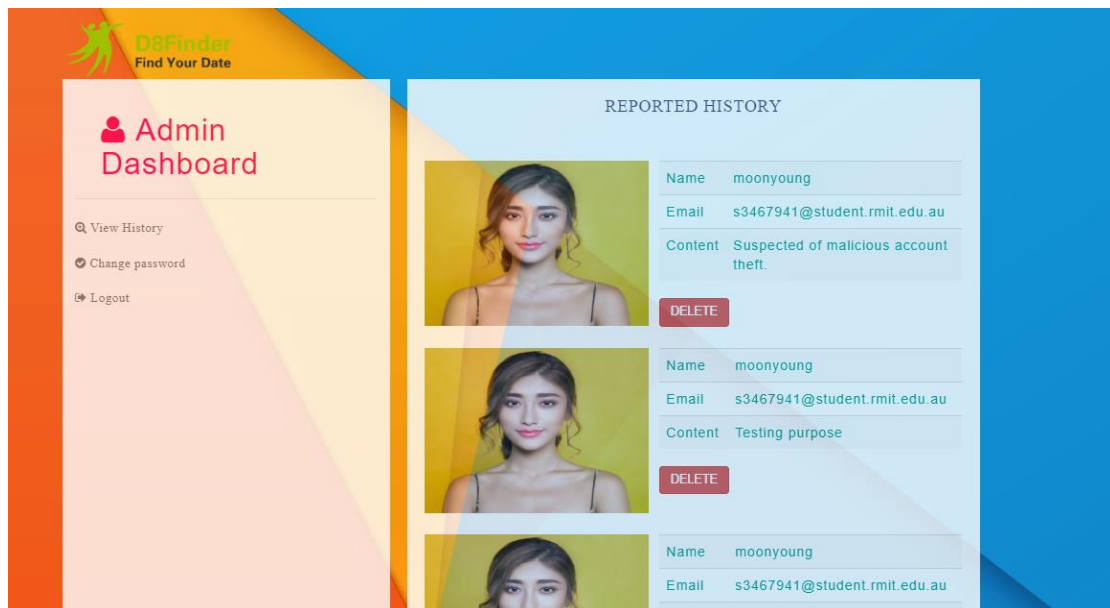

### Edit account password:

In this part, admin can change their account password.

## View history:

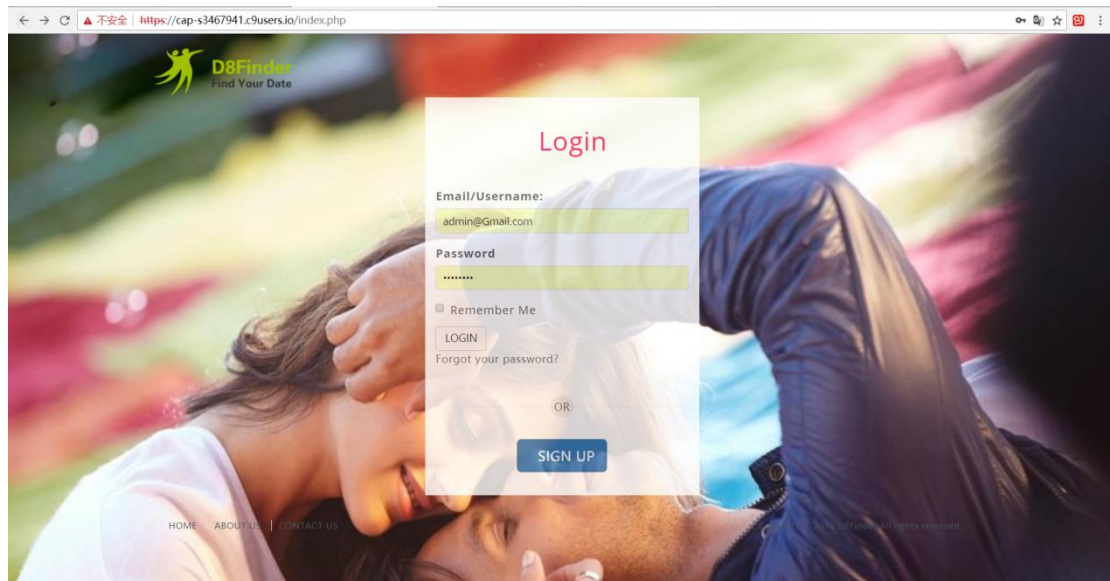

In this part, the administrator can monitor the user's behaviours such as:

In reported history area, admin can check the reasons of reporting and who was reported. After checking those user, admin can delete those user (who was reported several times) from the system.

## Logout:

Same as the user part, when the administrator click the logout, they will have a secure logout in this system.

## Troubleshooting

- User only can upload the image which is jpeg format, otherwise the system will not be able to upload their profile image. We will fix this issue in next updated version, please understand that.
- In email verification page, once user click submit button, the page will refresh but will not show any message that it sent the verification email. However, once user submit, the email was sent. Please check your inbox after submitting the form.
- User will not be able to sign up using duplicated (same) email address.
