# Technical Help from technical expert in Industry

- Technical expert name: Binh Lee
- Organization: Swinburne University of Technology
- Position: Software Engineer
- Lesson learn
  - MatchMaking Algorithm using PHP: Our team divided the MatchMaking algorithm into two phases. Phase1 was easy to implement, but it was difficult on phase 2, and I got advice and help on this issue. Using two statement of SQL query instead of using math.
  - Advice to implementing chatting functionality. The Matthew Hezel(developer in the team) having some problem to make chatting function in web. Jimin AHN(Product Owner) got advice from an expert for the chat function. As a result, PHP is not suitable for real-time communication and is recommended to use API. The recommended function is NodeJs. We will be working with Matthew for the next three weeks.
